CYBERSECURITY ADVISORY

TrickBot Malware

Last Revised: May 20, 2021

Alert Code: AA21-076A

Summary

This Joint Cybersecurity Advisory uses the MITRE Adversarial Tactics, Techniques, and Common Knowledge (ATT&CK®) framework, Version 8. See the [ATT&CK for Enterprise](https://attack.mitre.org/versions/v8/techniques/enterprise/) <<https://attack.mitre.org/versions/v8/techniques/enterprise/>> for all referenced threat actor tactics and techniques.

The Cybersecurity and Infrastructure Security Agency (CISA) and Federal Bureau of Investigation (FBI) have observed continued targeting through spearphishing campaigns using TrickBot malware in North America. A sophisticated group of cybercrime actors is luring victims, via phishing emails, with a traffic infringement phishing scheme to download TrickBot.

[Give Feedback](#)

TrickBot—first identified in 2016—is a Trojan developed and operated by a sophisticated group of cybercrime actors. Originally designed as a banking Trojan to steal financial data, TrickBot has evolved into highly modular, multi-stage malware that provides its operators a full suite of tools to conduct a myriad of illegal cyber activities.

To secure against TrickBot, CISA and FBI recommend implementing the mitigation measures described in this Joint Cybersecurity Advisory, which include blocking suspicious Internet Protocol addresses, using antivirus software, and providing social engineering and phishing training to employees.

[Click here](#) for a PDF version of this report.

Technical Details

TrickBot is an advanced Trojan that malicious actors spread primarily by spearphishing campaigns using tailored emails that contain malicious attachments or links, which—if enabled—execute malware (*Phishing: Spearphishing Attachment* [T1566.001 <<https://attack.mitre.org/versions/v8/techniques/t1566/001/>>], *Phishing: Spearphishing Link* [T1566.002 <<https://attack.mitre.org/versions/v8/techniques/t1566/002/>>]). CISA and FBI are aware of recent attacks that use phishing emails, claiming to contain proof of a traffic violation, to steal sensitive information. The phishing emails contain links that redirect to a website hosted on a compromised server that prompts the victim to click on photo proof of their traffic violation. (*User Execution: Malicious Link* [T1204.001 <<https://attack.mitre.org/versions/v8/techniques/t1204/001/>>], *User Execution: Malicious File* [T1204.002 <<https://attack.mitre.org/versions/v8/techniques/t1204/002/>>]). In clicking the photo, the victim unknowingly downloads a malicious JavaScript file that, when opened, automatically communicates with the malicious actor’s command and control (C2) server to download TrickBot to the victim’s system (*Command and Scripting Interpreter: JavaScript* [T1059.007 <<https://attack.mitre.org/versions/v8/techniques/t1059/007/>>]).

Attackers can use TrickBot to:

Give Feedback

- Drop other malware, such as Ryuk and Conti ransomware, or
- Serve as an Emotet downloader (*Ingress Tool Transfer* [T1105 <<https://attack.mitre.org/versions/v8/techniques/t1105/>>]).^[1] [<https://www.fireeye.com/blog/threat-research/2019/01/a-nasty-trick-from-credential-theft-malware-to-business-disruption.html>]

TrickBot uses person-in-the-browser attacks to steal information, such as login credentials (*Man in the Browser* [T1185 <<https://attack.mitre.org/versions/v8/techniques/t1185/>>]). Additionally, some of TrickBot's modules spread the malware laterally across a network by abusing the Server Message Block (SMB) Protocol. TrickBot operators have a toolset capable of spanning the entirety of the MITRE ATT&CK framework, from actively or passively gathering information that can be used to support targeting (*Reconnaissance* [TA0043 <<https://attack.mitre.org/tactics/ta0043/>>]), to trying to manipulate, interrupt, or destroy systems and data (*Impact* [TA0040 <<https://attack.mitre.org/tactics/ta0040/>>]).

TrickBot is capable of data exfiltration over a hardcoded C2 server, cryptomining, and host enumeration (e.g., reconnaissance of Unified Extensible Firmware Interface or Basic Input/Output System [UEFI/BIOS] firmware) (*Exfiltration Over C2 Channel* [T1041 <<https://attack.mitre.org/versions/v8/techniques/t1041/>>], *Resource Hijacking* [T1496 <<https://attack.mitre.org/versions/v8/techniques/t1496/>>], *System Information Discovery*.^[2] [<https://eclypsium.com/2020/12/03/trickbot-now-offers-trickboot-persist-brick-profit/#background>]) For host enumeration, operators deliver TrickBot in modules containing a configuration file with specific tasks.

Figure 1 lays out TrickBot's use of enterprise techniques.

Figure 1: MITRE ATT&CK enterprise techniques used by TrickBot

Give Feedback

MITRE ATT&CK Techniques

According to MITRE, *TrickBot* [S0266 <<https://attack.mitre.org/software/s0266/>>] uses the ATT&CK techniques listed in table 1.

Table 1: TrickBot ATT&CK techniques for enterprise

Initial Access [TA0001 <<https://attack.mitre.org/versions/v8/tactics/ta0001/>>]

Technique Title	ID	Use
Phishing: Spearphishing Attachment	T1566.001 < https://attack.mitre.org/versions/v8/techniques/t1566/001/ >	TrickBot has used an email with an Excel sheet containing a malicious macro to deploy the malware.
Phishing: Spearphishing Link	T1566.002 < https://attack.mitre.org/versions/v8/techniques/t1566/002/ >	TrickBot has been delivered via malicious links in phishing emails.

Execution [TA0002 <<https://attack.mitre.org/versions/v8/tactics/ta0002/>>]

Technique Title	ID	Use
Scheduled Task/Job: Scheduled Task	T1053.005 < https://attack.mitre.org/versions/v8/techniques/t1053/005/ >	TrickBot creates a scheduled task on the system that provides persistence.

Give Feedback

Technique Title	ID	Use
Command and Scripting Interpreter: Windows Command Shell	T1059.003 https://attack.mitre.org/versions/v8/techniques/t1059/003/	TrickBot has used macros in Excel documents to download and deploy the malware on the user's machine.
Command and Scripting Interpreter: JavaScript/JScript	T1059.007 https://attack.mitre.org/versions/v8/techniques/t1059/007/	TrickBot victims unknowingly download a malicious JavaScript file that, when opened, automatically communicates with the malicious actor's C2 server to download TrickBot to the victim's system.
Native API	T1106 https://attack.mitre.org/versions/v8/techniques/t1106/	TrickBot uses the Windows Application Programming Interface (API) call, CreateProcessW(), to manage execution flow.
User Execution: Malicious Link	T1204.001 https://attack.mitre.org/versions/v8/techniques/t1204/001/	TrickBot has sent spearphishing emails in an attempt to lure users to click on a malicious link.

Give Feedback

Technique Title	ID	Use
User Execution: Malicious File	T1204.002 < https://attack.mitre.org/versions/v8/techniques/t1204/002/ >	TrickBot has attempted to get users to launch malicious documents to deliver its payload.

Persistence [[TA0003 <https://attack.mitre.org/versions/v8/tactics/ta0003/>](https://attack.mitre.org/versions/v8/tactics/ta0003/)]

Technique Title	ID	Use
Scheduled Task/Job: Scheduled Task	T1053.005 < https://attack.mitre.org/versions/v8/techniques/t1053/005/ >	TrickBot creates a scheduled task on the system that provides persistence.
Create or Modify System Process: Windows Service	T1543.003 < https://attack.mitre.org/versions/v8/techniques/t1543/003/ >	TrickBot establishes persistence by creating an autostart service that allows it to run whenever the machine boots.

Give Feedback

Privilege Escalation [[TA0004 <https://attack.mitre.org/versions/v8/tactics/ta0004/>](https://attack.mitre.org/versions/v8/tactics/ta0004/)]

Technique Title	ID	Use
Scheduled Task/Job: Scheduled Task	T1053.005 < https://attack.mitre.org/versions/v8/techniques/t1053/005/ >	TrickBot creates a scheduled task on the system that provides persistence.

Technique Title	ID	Use
Process Injection: Process Hollowing	T1055.012 < https://attack.mitre.org/versions/v8/techniques/t1055/012/ >	TrickBot injects into the svchost.exe process.
Create or Modify System Process: Windows Service	T1543.003 < https://attack.mitre.org/versions/v8/techniques/t1543/003/ >	TrickBot establishes persistence by creating an autostart service that allows it to run whenever the machine boots.

Defense Evasion [TA0005 <<https://attack.mitre.org/versions/v8/tactics/ta0005/>>]

Technique Title	ID	Use
Obfuscated Files or Information	T1027 < https://attack.mitre.org/versions/v8/techniques/t1027/ >	TrickBot uses non-descriptive names to hide functionality and uses an AES CBC (256 bits) encryption algorithm for its loader and configuration files.
Obfuscated Files or Information: Software Packing	T1027.002 < https://attack.mitre.org/versions/v8/techniques/t1027/002/ >	TrickBot leverages a custom packer to obfuscate its functionality.

Give Feedback

Technique Title	ID	Use
Masquerading	T1036 < https://attack.mitre.org/versions/v8/techniques/t1036 >	The TrickBot downloader has used an icon to appear as a Microsoft Word document.
Process Injection: Process Hollowing	T1055.012 < https://attack.mitre.org/versions/v8/techniques/t1055/012/ >	TrickBot injects into the svchost.exe process.
Modify Registry	T1112 < https://attack.mitre.org/versions/v8/techniques/t1112 >	TrickBot can modify registry entries.
Deobfuscate/Decode Files or Information	T1140 < https://attack.mitre.org/versions/v8/techniques/t1140 >	TrickBot decodes the configuration data and modules.
Subvert Trust Controls: Code Signing	T1553.002 < https://attack.mitre.org/versions/v8/techniques/t1553/002 >	TrickBot has come with a signed downloader component.
Impair Defenses: Disable or Modify Tools	T1562.001 < https://attack.mitre.org/versions/v8/techniques/t1562/001 >	TrickBot can disable Windows Defender.

Give Feedback

Credential Access [TA0006 <<https://attack.mitre.org/versions/v8/tactics/ta0006>>]

Technique Title	ID	Use
Input Capture: Credential API Hooking	T1056.004 https://attack.mitre.org/versions/v8/techniques/t1056/004/	TrickBot has the ability to capture Remote Desktop Protocol credentials by capturing the CredEnumerateA API.
Unsecured Credentials: Credentials in Files	T1552.001 https://attack.mitre.org/versions/v8/techniques/t1552/001/	TrickBot can obtain passwords stored in files from several applications such as Outlook, Filezilla, OpenSSH, OpenVPN and WinSCP. Additionally, it searches for the .vnc.lnk affix to steal VNC credentials.
Unsecured Credentials: Credentials in Registry	T1552.002 https://attack.mitre.org/versions/v8/techniques/t1552/002/	TrickBot has retrieved PuTTY credentials by querying the Software\SimonTatham\Putty\Sessions registry key.
Credentials from Password Stores	T1555 https://attack.mitre.org/versions/v8/techniques/t1555/	TrickBot can steal passwords from the KeePass open-source password manager.

Give Feedback

Technique Title	ID	Use
Credentials from Password Stores: Credentials from Web Browsers	T1555.003 < https://attack.mitre.org/versions/v8/techniques/t1555.003/ >	TrickBot can obtain passwords stored in files from web browsers such as Chrome, Firefox, Internet Explorer, and Microsoft Edge, sometimes using esentutl.

Discovery [[TA0007 <https://attack.mitre.org/versions/v8/tactics/ta0007/>](https://attack.mitre.org/versions/v8/tactics/ta0007/)]

Technique Tactic	ID	Use
System Service Discovery	T1007 < https://attack.mitre.org/versions/v8/techniques/t1007/ >	TrickBot collects a list of installed programs and services on the system's machine.
System Network Configuration Discovery	T1016 < https://attack.mitre.org/versions/v8/techniques/t1016/ >	TrickBot obtains the IP address, location, and other relevant network information from the victim's machine.
Remote System Discovery	T1018 < https://attack.mitre.org/versions/v8/techniques/t1018/ >	TrickBot can enumerate computers and network devices.

Give Feedback

Technique Tactic	ID	Use
System Owner/User Discovery	T1033 < https://attack.mitre.org/versions/v8/techniques/t1033 >	TrickBot can identify the user and groups the user belongs to on a compromised host.
Permission Groups Discovery	T1069 < https://attack.mitre.org/versions/v8/techniques/t1069 >	TrickBot can identify the groups the user on a compromised host belongs to.
System Information Discovery	T1082 < https://attack.mitre.org/versions/v8/techniques/t1082 >	TrickBot gathers the OS version, machine name, CPU type, amount of RAM available from the victim's machine.
File and Directory Discovery	T1083 < https://attack.mitre.org/versions/v8/techniques/t1083 >	TrickBot searches the system for all of the following file extensions: .avi, .mov, .mkv, .mpeg, .mpeg4, .mp4, .mp3, .wav, .ogg, .jpeg, .jpg, .png, .bmp, .gif, .tiff, .ico, .xlsx, and .zip. It can also obtain browsing history, cookies, and plug-in information.
Account Discovery: Local Account	T1087.001 < https://attack.mitre.org/versions/v8/techniques/t1087/001 >	TrickBot collects the users of the system.

Give Feedback

Technique Tactic	ID	Use
Account Discovery: Email Account	T1087.003 < https://attack.mitre.org/versions/v8/techniques/t1087/003 >	TrickBot collects email addresses from Outlook.
Domain Trust Discovery	T1482 < https://attack.mitre.org/versions/v8/techniques/t1482 >	TrickBot can gather information about domain trusts by utilizing Nltest.

Lateral Movement [[TA0008 <https://attack.mitre.org/versions/v8/tactics/ta0008/>](https://attack.mitre.org/versions/v8/tactics/ta0008/)]

Technique Tactic	ID	Use
Lateral Tool Transfer	T1570 < https://attack.mitre.org/versions/v8/techniques/t1570 >	Some TrickBot modules spread the malware laterally across a network by abusing the SMB Protocol.

Collection [[TA0009 <https://attack.mitre.org/versions/v8/tactics/ta0009/>](https://attack.mitre.org/versions/v8/tactics/ta0009/)]

Technique Tactic	ID	Use
Data from Local System	T1005 < https://attack.mitre.org/versions/v8/techniques/t1005 >	TrickBot collects local files and information from the victim's local machine.

Give Feedback

Technique Tactic	ID	Use
Input Capture:Credential API Hooking	T1056.004 < https://attack.mitre.org/versions/v8/techniques/t1056/004/ >	TrickBot has the ability to capture Remote Desktop Protocol credentials by capturing the CredEnumerateA API.
Person in the Browser	T1185 < https://attack.mitre.org/versions/v8/techniques/t1185/ >	TrickBot uses web injects and browser redirection to trick the user into providing their login credentials on a fake or modified webpage.

Command and Control [TA0011 <<https://attack.mitre.org/versions/v8/tactics/ta0011/>>]

Technique Tactic	ID	Use
Fallback Channels	T1008 < https://attack.mitre.org/versions/v8/techniques/t1008/ >	TrickBot can use secondary command and control (C2) servers for communication after establishing connectivity and relaying victim information to primary C2 servers.

Give Feedback

Technique Tactic	ID	Use
Application Layer Protocol: Web Protocols	T1071.001 < https://attack.mitre.org/versions/v8/techniques/t1071/001 >	TrickBot uses HTTPS to communicate with its C2 servers, to get malware updates, modules that perform most of the malware logic and various configuration files.
Ingress Tool Transfer	T1105 < https://attack.mitre.org/versions/v8/techniques/t1105 >	TrickBot downloads several additional files and saves them to the victim's machine.
Data Encoding: Standard Encoding	T1132.001 < https://attack.mitre.org/versions/v8/techniques/t1132/001 >	TrickBot can Base64-encode C2 commands.
Non-Standard Port	T1571 < https://attack.mitre.org/versions/v8/techniques/t1571 >	Some TrickBot samples have used HTTP over ports 447 and 8082 for C2.
Encrypted Channel: Symmetric Cryptography	T1573.001 < https://attack.mitre.org/versions/v8/techniques/t1573/001 >	TrickBot uses a custom crypter leveraging Microsoft's CryptoAPI to encrypt C2 traffic.

Exfiltration [TA0010 <<https://attack.mitre.org/versions/v8/tactics/ta0010/>>]

Give Feedback

Technique Tactic	ID	Use
Exfiltration Over C2 Channel	T1041 < https://attack.mitre.org/versions/v8/techniques/t1041 >	TrickBot can send information about the compromised host to a hardcoded C2 server.

Impact [TA0040 <<https://attack.mitre.org/versions/v8/tactics/ta0040/>>]

Technique Tactic	ID	Use
Resource Hijacking	T1496 < https://attack.mitre.org/versions/v8/techniques/t1496 >	TrickBot actors can leverage the resources of co-opted systems for cryptomining to validate transactions of cryptocurrency networks and earn virtual currency.

Detection

Signatures

CISA developed the following snort signature for use in detecting network activity associated with TrickBot activity.

Give Feedback

```
alert tcp any [443,447] -> any any (msg:"TRICKBOT:SSL/TLS Server X.509 Cert Field contains 'example.com' (Hex)"; sid:1; rev:1; flow:established,from_server; ssl_state:server_hello; content:"|0b|example.com"; fast_pattern:only; content:"Global Security"; content:"IT Department";

http;)
```

Mitigations

CISA and FBI recommend that network defenders—in federal, state, local, tribal, territorial governments, and the private sector—consider applying the following best practices to strengthen the security posture of their organization's systems. System owners and administrators should review any configuration changes prior to implementation to avoid negative impacts.

- Provide social engineering and phishing training to employees.
- Consider drafting or updating a policy addressing suspicious emails that specifies users must report all suspicious emails to the security and/or IT departments.
- Mark external emails with a banner denoting the email is from an external source to assist users in detecting spoofed emails.
- Implement Group Policy Object and firewall rules.
- Implement an antivirus program and a formalized patch management process.
- Implement filters at the email gateway and block suspicious IP addresses at the firewall.
- Adhere to the principle of least privilege.
- Implement a Domain-Based Message Authentication, Reporting & Conformance validation system.
- Segment and segregate networks and functions.
- Limit unnecessary lateral communications between network hosts, segments, and devices.

Give Feedback

- Consider using application allowlisting technology on all assets to ensure that only authorized software executes, and all unauthorized software is blocked from executing on assets. Ensure that such technology only allows authorized, digitally signed scripts to run on a system.
- Enforce multi-factor authentication.
- Enable a firewall on agency workstations configured to deny unsolicited connection requests.
- Disable unnecessary services on agency workstations and servers.
- Implement an Intrusion Detection System, if not already used, to detect C2 activity and other potentially malicious network activity
- Monitor web traffic. Restrict user access to suspicious or risky sites.
- Maintain situational awareness of the latest threats and implement appropriate access control lists.
- Disable the use of SMBv1 across the network and require at least SMBv2 to harden systems against network propagation modules used by TrickBot.
- Visit the MITRE ATT&CK Techniques pages (linked in table 1 above) for additional mitigation and detection strategies.
- See CISA's Alert on [Technical Approaches to Uncovering and Remediating Malicious Activity](#) <<https://us-cert.cisa.gov/ncas/alerts/aa20-245a>> for more information on addressing potential incidents and applying best practice incident response procedures.

Give Feedback

For additional information on malware incident prevention and handling, see the National Institute of Standards and Technology Special Publication 800-83, [Guide to Malware Incident Prevention and Handling for Desktops and Laptops](#)

<<https://csrc.nist.gov/publications/detail/sp/800-83/rev-1/final>>.
