## CYBERSECURITY ADVISORY

# Russian FSB Cyber Actor Star Blizzard Continues Worldwide Spearphishing Campaigns

**Release Date:** December 07, 2023

**Alert Code:** AA23-341A

**RELATED TOPICS:** NATION-STATE THREATS <[/topics/cyber-threats-and-advisories/nation-state-cyber-actors](#)>, CYBER THREATS AND ADVISORIES <[/topics/cyber-threats-and-advisories](#)>, MALWARE, PHISHING, AND RANSOMWARE <[/topics/cyber-threats-and-advisories/malware-phishing-and-ransomware](#)>

**The Russia-based actor is targeting organizations and individuals in the UK and other geographical areas of interest.**

Give Feedback

## OVERVIEW

The Russia-based actor Star Blizzard (formerly known as SEABORGIUM, also known as Callisto Group/TA446/COLDRIVER/TAG-53/BlueCharlie) continues to successfully use spearphishing attacks against targeted organizations and individuals in the UK, and other geographical areas of interest, for information-gathering activity.

The UK National Cyber Security Centre (NCSC), the US Cybersecurity and Infrastructure Security Agency (CISA), the US Federal Bureau of Investigation (FBI), the US National Security Agency (NSA), the US Cyber National Mission Force (CNMF), the Australian Signals Directorate's Australian Cyber Security Centre (ASD's ACSC), the Canadian Centre for Cyber Security (CCCS), and the New Zealand National Cyber Security Centre (NCSC-NZ) assess that Star Blizzard is almost certainly subordinate to the Russian Federal Security Service (FSB) Centre 18.

Industry has previously published details of Star Blizzard. This advisory draws on [that body of information](#) <<https://www.microsoft.com/en-us/security/blog/2022/08/15/disrupting-seaborgiums-ongoing-phishing-operations/>>.

This advisory raises awareness of the spearphishing techniques Star Blizzard uses to target individuals and organizations. This activity is continuing through 2023.

To download a PDF version of this advisory, see [Russian FSB Cyber Actor Star Blizzard Continues Worldwide Spearphishing Campaigns](#) <<https://www.ncsc.gov.uk/files/advisory-russian-fsb-cyber-actor-star-blizzard-continues-worldwide-spear-sphishing-campaigns.pdf>>.

## TARGETING PROFILE

Since 2019, Star Blizzard has targeted sectors including academia, defense, governmental organizations, NGOs, think tanks and politicians.

Targets in the UK and US appear to have been most affected by Star Blizzard activity, however activity has also been observed against targets in other NATO countries, and countries neighboring Russia.

During 2022, Star Blizzard activity appeared to expand further, to include defense-industrial targets, as well as US Department of Energy facilities.

Give Feedback

# OUTLINE OF THE ATTACKS

The activity is typical of spearphishing campaigns, where an actor targets a specific individual or group using information known to be of interest to the targets. In a spearphishing campaign, an actor perceives their target to have direct access to information of interest, be an access vector to another target, or both.

## Research and Preparation

Using open-source resources to conduct reconnaissance, including social media and professional networking platforms, Star Blizzard identifies hooks to engage their target. They take the time to research their interests and identify their real-world social or professional contacts [[T1589](https://attack.mitre.org/versions/v14/techniques/t1589/) <<https://attack.mitre.org/versions/v14/techniques/t1589/>>], [[T1593](https://attack.mitre.org/versions/v14/techniques/t1593/) <<https://attack.mitre.org/versions/v14/techniques/t1593/>>].

Star Blizzard creates email accounts impersonating known contacts of their targets to help appear legitimate. They also create fake social media or networking profiles that impersonate respected experts [[T1585.001](https://attack.mitre.org/versions/v14/techniques/t1585.001/) <<https://attack.mitre.org/versions/v14/techniques/t1585.001/>>] and have used supposed conference or event invitations as lures.

Star Blizzard uses webmail addresses from different providers, including Outlook, Gmail, Yahoo and Proton mail in their initial approach [[T1585.002](https://attack.mitre.org/versions/v14/techniques/t1585.002/) <<https://attack.mitre.org/versions/v14/techniques/t1585.002/>>], impersonating known contacts of the target or well-known names in the target's field of interest or sector.

To appear authentic, the actor also creates malicious domains resembling legitimate organizations [[T1583.001](https://attack.mitre.org/versions/v14/techniques/t1583.001/) <<https://attack.mitre.org/versions/v14/techniques/t1583.001/>>].

Microsoft Threat Intelligence Center (MSTIC) provides a list of observed Indicators of Compromise (IOCs) in their SEABORGIUM blog, but this is not exhaustive.

Give Feedback

# Preference for Personal Email Addresses

Star Blizzard has predominantly sent spearphishing emails to targets' personal email addresses, although they have also used targets' corporate or business email addresses. The actors may intentionally use personal emails to circumvent security controls in place on corporate networks.

## Building a Rapport

Having taken the time to research their targets' interests and contacts to create a believable approach, Star Blizzard now starts to build trust. They often begin by establishing benign contact on a topic they hope will engage their targets. There is often some correspondence between attacker and target, sometimes over an extended period, as the attacker builds rapport.

## Delivery of Malicious Link

Once trust is established, the attacker uses typical phishing tradecraft and shares a link [[T1566.002 <https://attack.mitre.org/versions/v14/techniques/t1566/002/>](https://attack.mitre.org/versions/v14/techniques/t1566/002/)], apparently to a document or website of interest. This leads the target to an actor-controlled server, prompting the target to enter account credentials.

The malicious link may be a URL in an email message, or the actor may embed a link in a document [[T1566.001 <https://attack.mitre.org/versions/v14/techniques/t1566/001/>](https://attack.mitre.org/versions/v14/techniques/t1566/001/)] on [OneDrive](#), [Google Drive](#), or other file-sharing platforms <<https://blog.google/threat-analysis-group/continued-cyber-activity-in-eastern-europe-observed-by-tag/>>.

Star Blizzard uses the open-source framework EvilGinx in their spearphishing activity, which allows them to harvest credentials and session cookies to successfully bypass the use of two-factor authentication [[T1539 <https://attack.mitre.org/versions/v14/techniques/t1539/>](https://attack.mitre.org/versions/v14/techniques/t1539/)], [[T1550.004 <https://attack.mitre.org/versions/v14/techniques/t1550/004/>](https://attack.mitre.org/versions/v14/techniques/t1550/004/)].

Give Feedback

## Exploitation and Further Activity

Whichever delivery method is used, once the target clicks on the malicious URL, they are directed to an actor-controlled server that mirrors the sign-in page for a legitimate service. Any credentials entered at this point are now compromised.

Star Blizzard then uses the stolen credentials to log in to a target's email account [T1078 <<https://attack.mitre.org/versions/v14/techniques/t1078/>>], where they are known to access and steal emails and attachments from the victim's inbox [T1114.002 <<https://attack.mitre.org/versions/v14/techniques/t1114/002/>>]. They have also set up mail-forwarding rules, giving them ongoing visibility of victim correspondence [T1114.003 <<https://attack.mitre.org/versions/v14/techniques/t1114/003/>>].

The actor has also used their access to a victim email account to access mailing-list data and a victim's contacts list, which they then use for follow-on targeting. They have also used compromised email accounts for further phishing activity [T1586.002 <<https://attack.mitre.org/versions/v14/techniques/t1586/002/>>].

## CONCLUSION

Spearphishing is an established technique used by many actors, and Star Blizzard uses it successfully, evolving the technique to maintain their success.

Individuals and organizations from previously targeted sectors should be vigilant of the techniques described in this advisory.

In the UK you can [report related suspicious activity to the NCSC](#) <<https://report.ncsc.gov.uk/>>.

Information on effective defense against spearphishing is included in the Mitigations section below.

<b>Collection</b>	T1114.002 <a href="https://attack.mitre.org/version/s/v14/techniques/t1114/002/">https://attack.mitre.org/version/s/v14/techniques/t1114/002/</a>	Email Collection: Remote Email Collection	Star Blizzard interacts directly with externally facing Exchange services, Office 365 and Google Workspace to access email and steal information using compromised credentials or access tokens.
<b>Collection</b>	T1114.003 <a href="https://attack.mitre.org/version/s/v14/techniques/t1114/003/">https://attack.mitre.org/version/s/v14/techniques/t1114/003/</a>	Email Collection: Email Forwarding Rule	Star Blizzard abuses email-forwarding rules to monitor the activities of a victim, steal information, and maintain persistent access to victim's emails, even after compromised credentials are reset.

Give Feedback

## MITIGATIONS

A number of mitigations will be useful in defending against the activity described in this advisory.

- **Use strong passwords. Use a separate password for email accounts and avoid password re-use across multiple services.** See NCSC guidance: [Top Tips for Staying Secure Online](https://www.ncsc.gov.uk/collection/top-tips-for-staying-secure-online/use-a-strong-and-separate-password-for-email) <<https://www.ncsc.gov.uk/collection/top-tips-for-staying-secure-online/use-a-strong-and-separate-password-for-email>>.
- **Use multi-factor authentication** (2-factor authentication/two-step authentication) to reduce the impact of password compromises. See NCSC guidance: [Multi-factor Authentication for Online Services](https://www.ncsc.gov.uk/guidance/multi-factor-authentication-online-services) <<https://www.ncsc.gov.uk/guidance/multi-factor-authentication-online-services>> and [Setting Up 2-Step Verification \(2SV\)](https://www.ncsc.gov.uk/guidance/setting-2-step-verification-2sv) <<https://www.ncsc.gov.uk/guidance/setting-2-step-verification-2sv>>.
- **Protect your devices and networks by keeping them up to date:** Use the latest supported versions, apply security updates promptly, use anti-virus and scan regularly to guard against known malware threats. See NCSC guidance: [Device Security Guidance](https://www.ncsc.gov.uk/collection/device-security-guidance/policies-and-settings/antivirus-and-other-security-software) <<https://www.ncsc.gov.uk/collection/device-security-guidance/policies-and-settings/antivirus-and-other-security-software>>.
- **Exercise vigilance.** Spearphishing emails are tailored to avoid suspicion. You may recognize the sender's name, but has the email come from an address that you recognize? Would you expect contact from this person's webmail address rather than their corporate email address? Has the suspicious email come to your personal/webmail address rather than your corporate one? Can you verify that the email is legitimate via another means? See NCSC guidance: [Phishing attacks: Defending Your Organization](https://www.ncsc.gov.uk/guidance/phishing) <<https://www.ncsc.gov.uk/guidance/phishing>> and [Internet Crime Complaint Center\(IC3\) | Industry Alerts](https://www.ic3.gov/home/industryalerts) <<https://www.ic3.gov/home/industryalerts>>.
- **Enable your email providers' automated email scanning features.** These are turned on by default for consumer mail providers. See NCSC guidance: [Telling Users to "Avoid Clicking Bad Links" Still Isn't Working](https://www.ncsc.gov.uk/blog-post/telling-users-to-avoid-clicking-bad-links-still-isnt-working) <<https://www.ncsc.gov.uk/blog-post/telling-users-to-avoid-clicking-bad-links-still-isnt-working>>.

Give Feedback

- **Disable mail-forwarding.** Attackers have been observed to set up mail-forwarding rules to maintain visibility of target emails. If you cannot disable mail-forwarding, then monitor settings regularly to ensure that a forwarding rule has not been set up by an external malicious actor.
